## The 216 Web-safe colors

John E. Beach

### Abstract

This package `\definecolors` the 216 colors that are “Web-safe”, *i.e.*, that are supported by most browsers. The color names (and hue sorting order) are from <http://www.visibone.com/colorlab/big.html>.

## 1 Usage

Usage is simple—simply add `\color{ColorName}` to your document, perhaps in a group to limit the color change to a portion of the document.

Colors are listed four different ways:

1. sorted by hue,
2. sorted by saturation (*i.e.*, all “**DarkHard**”, all “**LightHard**”, *etc.*),
3. sorted by color value, and
4. sorted alphabetically, in the index.

and paragraphing and forced line-breaks have been inserted so that color names are not hyphenated.

Each list is typeset in `\ShowColorSize` font size so that, at least for the first three, the entire list appears on one page.

This package interacts correctly with the `hypdoc` and `colordoc` packages.

## 2 Implementation

Define the 216 Web-safe colors using `\definecolor` from the `color` package. Each `\definecolor` is commented with decimal and hexadecimal values equivalent to the `rgb`.

```
1 <*colorweb.sty>
2 \RequirePackage{color}
```
